

**Dr. Christopher K. Mauney**  
Optometry, P.A.

---

**The Optomap**

Our doctor wants ALL PATIENTS to have a digital image of the retina annually with our new ultra-widefield imaging system. Retinal problems such as glaucoma, retinal holes/detachments, retinal tumors, diabetic retinopathy, and macular degeneration can be seen without dilation for most patient. This optional imaging is \$39.00 and is not covered by vision insurance. This digital imaging takes the place of diation in most cases.

**Please check the appropriate box below and sign:**

- Yes, I would like to have the visual field screening test.**  
 **No, I understand the importance of this, but decline at the time.**

**Peripheral Vision Test**

This office has the state-of-the-art Humphrey FDT Visual Field instrument to enhance the diagnostic and treatment services we provide. The computerized analyzer allows us to plot the peripheral vision of each eye. This test helps detect blind spots caused by diseases such as glaucoma, retinal detachment, and neurological conditions including some strokes. A visual field test may be the first indicator that a serious problem exists. This technology replaces the previous Dicon unit we used.

Dr. Mauney recommends a visual field test screening for all patients 15 years of age and older. This optional test is not covered by insurance. The fee for this visual field screening is \$18.00.
